

IN-ROOM WEB STATIONS

LOW PRICED COMPUTERS TERMINALS PROVIDING INTERNET ACCESS

HOW DOES A WEB STATION WORK?

A specially designed computer terminal runs a Linux based operating system through a bootable CD. The elimination of a hard drive and a Microsoft Windows based operating system makes this a low cost solution for providing Internet access in hotel rooms and vacation rental units.

CONNECTIVITY:

Can be connected to a broadband Internet connection though an Ethernet (RJ-45) or Wireless Wi-Fi connection with equipment provided by Emergency Management Solutions, Inc.

REQUIREMENTS:

- Broadband (Cable or DSL) Internet Connection
- Ethernet (wired) connection to a LAN router or an available Wi-Fi hotspot

ADVANTAGES:

1. No hard drive to store objectionable or illegal material. No liability for materials residing on the PC.
2. No cookies saved, no personal information from Guests saved
3. Cannot catch computer viruses and spyware
4. Virtually no computer maintenance necessary
5. Configuration cannot be changed by Guests.
6. Guests cannot install software.

COMPUTER TERMINAL SPECIFICATIONS *:

STANDARD CONFIGURATION:

- System performance: 1500+
- ATX case with either 350W or 400W power supply
- Motherboard PCCHIPS + Processor bundle + cables
